

Athabasca Minerals is a dynamic, growing, publicly traded company looking for a **Full Stack Developer** to support our various business units. This role would be responsible for developing leading edge software applications including developing code, testing, and implementing software products to deliver innovative client facing technologies and enhancements. The ideal candidate will be highly motivated, have a passion for technology and creative problem solving.

HOW WOULD YOU CONTRIBUTE

- Leading the coding, testing, documentation, implementation and maintenance of information technology solutions for business processes and customer requirements;
- Developing creative proof-of-concepts and prototypes of easy to navigate user interfaces (UI) to include graphics, icons and company branding;
- Collaborating with the various business units to define standards, best practices and processes around application development and design;
- Engaging with cross-functional teams and internal customers in a global-matrix environment to deliver innovative software solutions;
- Implementing functional and technical enhancements to meet business needs and requirements.

WHAT YOU BRING (the essentials)

- Bachelor's degree or equivalent experience in Computer Science;
- Demonstrate experience with Front-End design and development frameworks such as Angular (2+ and JS), NodeJS, and Bootstrap 3+;
- Proficiency in HTML, CSS, SCSS, JavaScript, TypeScript;
- Demonstrate experience with Back-End technologies such as PHP 5+, SQL (PostgreSQL preferred);
- Relevant experience using open-source JavaScript libraries such as Leaflet or OpenLayers;
- Demonstrate experience working with GIS and GeoServer;
- Proven success deploying application on AWS, DigitalOcean and/or Azure;
- Have excellent communication and presentation skills to articulate highly technical information in a clear and easy to understand manner;
- Be a good team player, enjoy collaboration as well as working independently;
- High level of problem-solving ability and keen attention to detail.

BONUS ATTRIBUTES (nice to have)

- Android and Apple App development experience;
- Solid understanding of Version Control (Git) and related tools such as Bitbucket;
- Experience deploying apps/sites on Heroku.

Athabasca is an integrated group of companies focused on the aggregates, industrial minerals and resource sectors, driven by technology to bring improved value to industry and our customers. Our business is comprised of 4 distinct, but synergetic, divisions that include:

AMI Aggregates - produces and sells aggregate out of its corporate pits and manages the Coffey Lake Public Pit on behalf of the Province of Alberta.

AMI Silica - positioning to become a leading supplier of premium domestic silica sand with regional deposits in Alberta and NE British Columbia.

AMI RockChain - a midstream technology-based business using its proprietary RockChain™ digital platform, associated algorithm, and quality assurance & control services to provide cost-effective integrated supply / delivery solutions of industrial minerals to industry, and the construction sector.

TerraShift Engineering Ltd. - offers technology-based applications that support resource exploration and development, engineering services, environmental and regulatory planning, resource management, compliance reporting, and reclamation for a growing customer base.

Athabasca Minerals is an equal opportunity employer offering a competitive compensation package that includes a base salary, health and wellness benefits as well as the potential for company stock options.

To apply for this position please forward your resume and cover letter to recruiting@athabascaminerals.com
We thank all candidates for applying, but only those selected for an interview will be contacted, no phone calls please.
